

Overview

Developed in the year: 2012

Country or Region:
Europe

Industry: Data Storage

Customer Profile

Our client provides solutions for data storage. They are based in Europe.

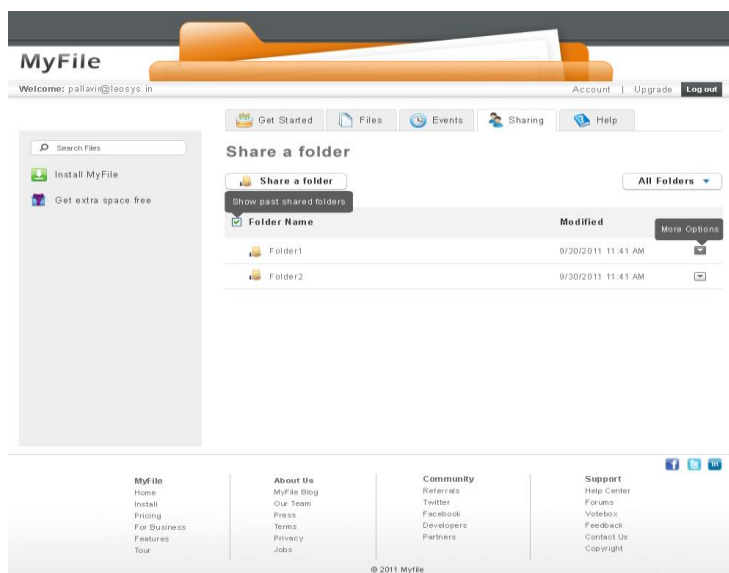

Business Situation

Our client was in need of a cloud based file sharing system that would manage and monitor their large user base. They were in search of a company who would be well versed with SaaS-based system and provide them with software that would manage their multi-tenant system and provide a comprehensive file sharing system make sharing of data effortless.

Solution

Leo TechnoSoft with its experience in SaaS based system, developed “My-File” a web-based file sharing and File synchronization system. ‘My-File’ helped our client store, monitor, manage and share their files and folders with others through Internet via file synchronization.

Built up the next generation Cloud based File sharing platform - “My-File”

Leo TechnoSoft developed “My-File” , a Cloud based File sharing and File synchronization system that allows you to get all your documents, photos and videos wherever required. Using our 'SaaS- Tenant' Framework, our SaaS experts enabled our client to experience a high speed transition from a single-tenant software application into a multi-tenant SaaS solution using cloud storage.

It was indeed a challenge for our experts, as the clients target customers were huge and hence a large system was needed to take care of their massive database. Also to come up with a tenant management system that will be reliable, secured and support all type of files wasn't an easy affair.

“My-file” not just helped the client to monitor and manage their huge database, but it made sharing the data via Internet much simpler, secured and dependable. It also provides file synchronization feature within a very limited time.

Technology

- SaaS Tenant
- Java/J2EE, struts
- .NET
- Telerik /AJAX

Benefits

- Fast and easy sharing of data
- Secured sharing of data and Files
- Support Multiple device
- Support all file types
