What is SaaS-Tenant™ ?

SaaS-Tenant™ is a Server offering Multi-Tenant framework and set of extensible administration and management capabilities to empower developers for building, managing, monitoring and administering SaaS based Multi-Tenant applications effortlessly.

Our framework enables easy transition to Multi Tenant SaaS Architecture from Single Tenant application or Web application providing freedom, flexibility and control of custom development without the complexities, risks, cost and time overheads of building and maintaining your own framework.

It provides a user interface and a programming interface to integrate with any SaaS enabled application for provisioning, business and operation services. Developers can easily use and extend the framework without having to reinvent the wheel. They can instead focus only on building the business related functionalities.

Leo TechnoSoft's "SaaS-Tenant™" reduces the development time and cost by more than 50-60%.

SaaS-Tenant™ Model

SaaS-Tenant™ Module

Key Benefits for ISV's

- Reduce Cost & time to build SaaS Application up to 60%
- Robust and Standardized Architecture to increase Agility
- Deliver Your SaaS Solution fast to market compare to your Competitors
- Limitless Scalability and Low maintenance IT cost
- Transit Existing .NET Web & Applications with 5-10% Source Code Changes
- Secure SaaS based Web service to provide mobile extension
- Effective Tenant Management and Administration to decrease customer support challenges.

Case Studies

Dental Management System

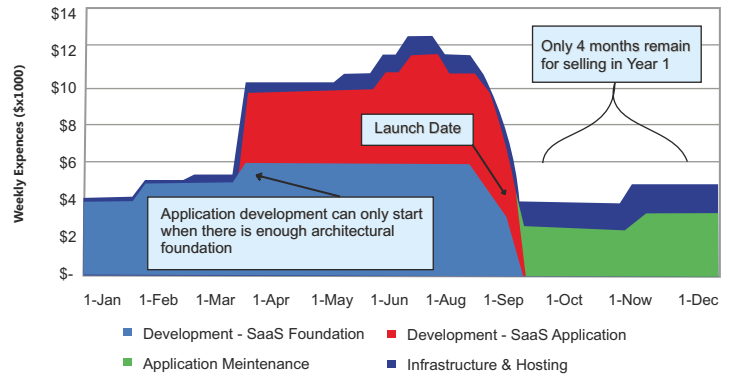

Leo TechnoSoft successfully partnered with one of biggest Dental association in North America to migrate their Desktop based Dental practice management system into SaaS based System using our SaaS Tenant Framework.

My-File

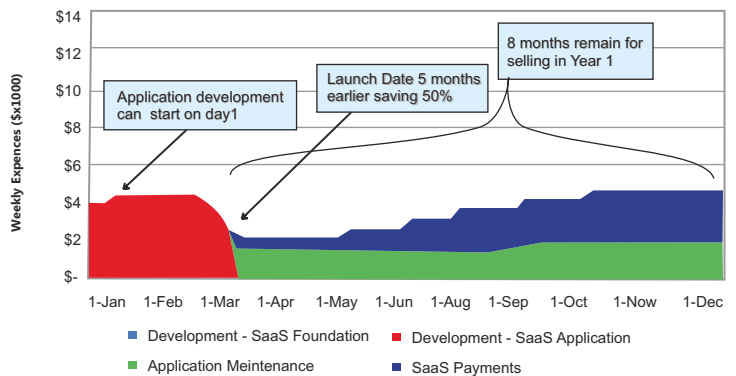

Leo TechnoSoft developed "My-File", a Cloud based File sharing and File synchronization system that allows you to get all your documents, photos and videos wherever required. Using our 'SaaS-Tenant' Framework, our SaaS experts enabled our client to experience a high speed transition from a single-tenant software application into a multi-tenant SaaS solution using cloud storage.
